## What ring size do I have?

You can determine your ring size very easily with the following two aids.

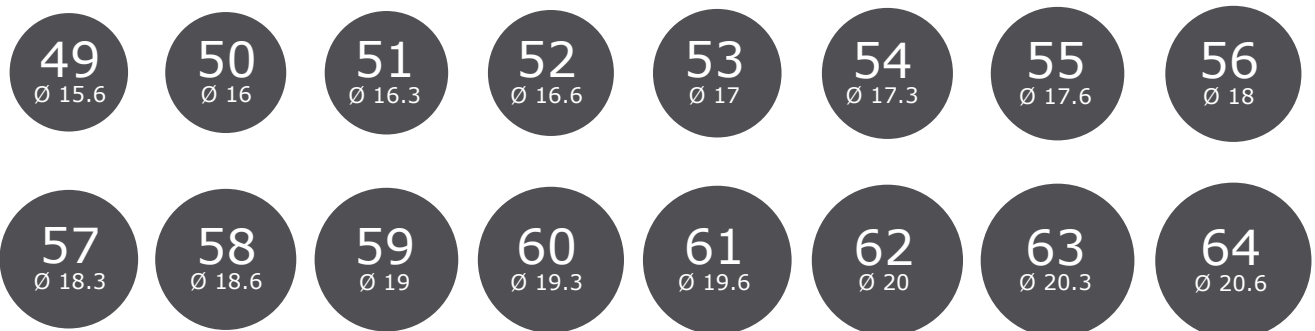

- 1 Print out this PDF – document. Check with the help of the control line if the printout is the size of the original. Is this not the case please check the printer adjustments. (Printout standard / 100 %)

Kontrolllinie : die Länge muss in beiden Richtungen 10 cm betragen

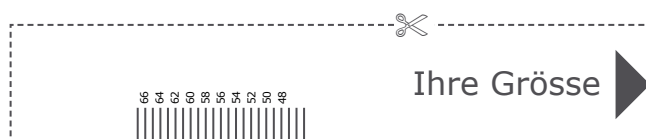

- 2 The first possibility to determine your ring size is:  
Put a ring you already own, which fits you well on to the circles below. Your measurement ring should be tight fitted because our rings are mostly big and rather heavy. The inner edge of your ring should be exactly the same size as the adequate circle. As soon as your ring fits a circle exactly (by only a razor thin white line in between the circle and the ring) this should be the right size which you can state on your order.

- 3 Now measure the ring... The bold numbers equate common ring size descriptions which you have to state in your order. You can also measure the inner ring diameter differently. The particular inner diameters you can find straight below the ring size (e.g. size 52 = Ø 16.6 mm)

We have all ring sizes from size 49 to 64.

- 4 The second method to determine your ring size is:  
Cut out the measuring tape below, exactly. Now put the measuring tape tightly around your finger and determine the size.

- 5 Should the ordered size still not fit you, it can be replaced at any time.
